day 2 report

topics today cover

what is selenium is a open source automated testing frame work used to specific web application

different browsers and platfrom  we can use multiple programming languages like  javascript (node.js),Groovy,c#

,perl,PHP,python,ruby,scala.the test can run against most modern web browsers. selenium test tool its called selenium testing.

selenium is not a single tool  but selenium sute for software each piece.selenium runs on windows,LIniux, and MacOS.
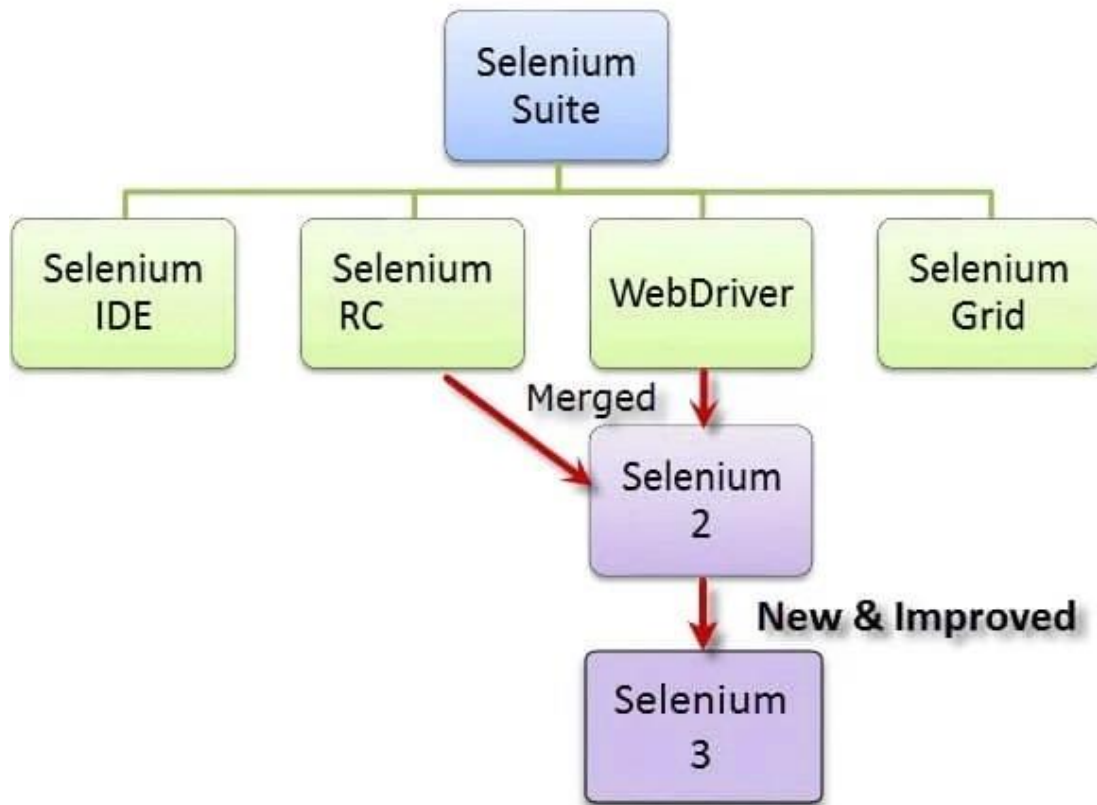

here is list of tools :

1 Selenium Integrated Development (IDE)

2 Selenium Remote Control (RC)

3 Web Driver

4 Seleniun Grid

IN the above the chart is the introducing of the selinium

Selenium (IDE) Selenium (RC)and  Web Driver Merged in to a single frame work to from   selenium 2 is Now New &Improved and from selenium 3.  Selinum1,by the way refers to selenium rc .
